PROJECTS

LightGCN Recommendation Engine *Jan 2026 – Apr 2026*

- Built a hybrid recommender system pairing graph-based collaborative filtering (LightGCN) with LLM-powered conversational refinement (SBERT + Groq).
- Enhanced user intent capture beyond similarity matching, improving NDCG@10 by 3.2% and hit rate (HR@10) to 0.80 across users.

Distributed Online Coding Assessment Platform *Mar 2026 – July 2026*

- Designed a full-stack coding judge with an async, queue-based evaluation pipeline (Spring Boot, RabbitMQ, Docker) for reliability under concurrent load across Python, Java, and C++.
- Developed an admin dashboard enabling non-technical instructors to manage problems independently.

Course Registration System *Sept 2024 – Oct 2024*

- Developed a Java-based course registration system supporting 4 user roles and 8+ features including enrollment, CGPA calculation, and complaint handling.
- Applied OOP principles, exception handling, and UML-based modular design.
